mailto:joerg.feuerhake@free-penguin.org

The whole Tux is vertically symetric. So here
You learn how to make one half. The other half
is just the mirror of this one here.
There are loads of tricks to sew this one properly thats
why some pictures are attached here.

To implement the eyes it would be best to use painted or
stiched patches and just attach them.

TODOS: Further development of the feet, they are now
in development status, they have to be improved

Changelog:
- enhancements in curveature of the head
- further enhancements of head and behinds
- put some cm- and inch-rulers to it, to give sewers
  an idea of the original size
- improved beak form
- color marks are put within the patches
- WhichPartGoesWithWhich Documentation
